DESIGN PRINCIPLES

- Utility-first token with demand tied to platform activity
- Sustainable reward emissions with daily caps and decay
- Treasury-backed growth, buybacks, and ecosystem funding
- Player alignment through staking and competitive rewards
- Deflationary sinks via burns, upgrades, and betting mechanics
- Conservative TGE float to reduce early sell pressure

Token

GEMBOT

BEP-20 · BNB Chain

Total supply

1,000,000,000

Initial circulating at TGE

101,900,000

10.19% of total supply

Primary launch candidate

ChainGPT Pad

Token Utility

GEMBOT is designed to sit at the center of platform activity, connecting ownership, rewards, access, and governance into one game economy.

01

NFA Minting

All future NFA minting, premium agent creation, and upgrade paths can be priced in GEMBOT, creating direct demand from users who want battle-ready agents.

02

Compete-to-Earn

NFA-linked bots earn GEMBOT based on battle wins, ELO, rarity tier, and anti-farming controls, converting performance into token rewards.

03

Betting

Users can place battle-side predictions and event wagers in GEMBOT, driving token velocity while feeding treasury and burn flows.

04

Staking

Staking unlocks reward boosts, premium strategies, fee discounts, private leagues, and long-term platform alignment.

05

Governance

Holders and stakers can vote on new pairs, rules, model support, and treasury priorities as governance expands over time.

06

Fee Discounts

Users paying fees in GEMBOT receive discounts on minting, premium products, entry fees, betting settlement, and marketplace activity.

CORE ECONOMY LOOPS

Buy token → Mint NFA

Stake token → Unlock boosts

Compete → Earn rewards

Bet in token → Velocity + burns

Treasury revenue → Buyback / growth

TREASURY REVENUE SOURCES

- Platform fees: **5%**
- Marketplace royalties: **2.5%**
- Mint fees from Genesis and future NFA sales
- Future premium league, subscription, API, and sponsorship flows

PRIORITY TREASURY USES

- Buybacks during strategic windows
- Development, audits, product, infra, and AI systems
- Marketing, tournaments, partnerships, and ecosystem grants
- Liquidity support and emergency protocol defense

Utility + Treasury

2

Token Distribution

The proposed 1B supply is structured to prioritize community incentives, treasury resilience, and sustainable post-TGE growth.

CATEGORY	%	TOKENS	PURPOSE
Community & Rewards	28.0%	280,000,000	Compete-to-earn, league rewards, community incentives
Treasury	20.0%	200,000,000	Protocol treasury, buybacks, runway, strategic spending
Ecosystem Fund	15.0%	150,000,000	Partnerships, grants, integrations, model ecosystem
Team	15.0%	150,000,000	Core contributors and long-term execution
Liquidity	10.0%	100,000,000	DEX/CEX liquidity, LP programs, market support
Marketing & Growth	7.0%	70,000,000	Launch campaigns, KOLs, user acquisition
Advisors	3.0%	30,000,000	Strategic, technical, and BD support
Public Sale / IDO	2.0%	20,000,000	TGE public raise
Total	100%	1,000,000,000	Full token supply

63%

Community + Treasury + Ecosystem. Majority reserved for growth, incentives, and protocol sustainability.

18%

Team + Advisors. Aligned but controlled insider share for a live product with traction.

12%

Liquidity + Public Sale. Enough to support launch without flooding the market.

Distribution

3

Vesting & TGE Float

The unlock schedule is intentionally conservative to maintain a manageable launch float while still funding liquidity, sale settlement, and early growth.

CATEGORY	TGE UNLOCK	UNLOCKED AT TGE	CLIFF	VESTING
Community & Rewards	8%	22,400,000	None	Linear over 48 months
Treasury	10%	20,000,000	None	Linear over 48 months
Ecosystem Fund	5%	7,500,000	3 months	Linear over 36 months
Team	0%	0	12 months	Linear over 24 months after cliff
Liquidity	40%	40,000,000	None	Remainder unlocked over 12 months
Marketing & Growth	10%	7,000,000	None	Linear over 24 months
Advisors	0%	0	6 months	Linear over 18 months
Public Sale / IDO	25%	5,000,000	None	75% linear over 6 months
Total initial circulating		101,900,000		10.19% of total supply

UNLOCK PROFILE

Liquidity		40%
Public Sale		25%
Treasury		10%
Marketing		10%
Community		8%
Ecosystem		5%
Team		0%
Advisors		0%

WHY THIS WORKS

- Insider unlock remains conservative at launch
- Liquidity gets enough float to support price discovery
- Community rewards unlock slowly instead of over-supplying TGE
- Team vesting structure is credible for launchpad and investor diligence
- Launch float stays below 11% of total supply

Vesting

4

Compete-to-Earn Mechanics

Rewards are tied to competitive quality, not just participation volume. The goal is to reward skill, rarity, and consistency while keeping emissions bounded.

Reward per win = Base Win Reward × Tier Multiplier × ELO Multiplier × Activity Quality Multiplier

NFA RARITY MULTIPLIERS

Bronze
1.00×

Silver
1.15×

Gold
1.35×

Platinum
1.60×

Diamond
1.95×

Legendary
2.40×

ELO MULTIPLIERS

ELO BAND	MULTIPLIER
< 1200	0.85×
1200-1399	1.00×
1400-1599	1.10×
1600-1799	1.25×
1800-1999	1.45×
2000+	1.70×

EMISSION CONTROLS

8
BASE WIN REWARD

350K
DAILY EMISSION CAP

- Single bot cap ≤ 0.25% of daily arena emissions
- Single wallet cap ≤ 1.0% of daily arena emissions
- Match quality multiplier discourages farming and low-quality loops

EMISSIONS DECAY SCHEDULE

YEAR 1
100%
Full base emissions

YEAR 2
80%
Moderate reduction

YEAR 3
65%
Further sustainability shift

YEAR 4
50%
Lower mature-stage emissions

YEAR 5+
Gov
Maintenance emissions set by governance

Staking, Burns & TGE Roadmap

STAKING APY TIERS

LOCK PERIOD	BASE APY	NOTES
Flexible	6%	Lowest reward, no premium boosts
30 days	10%	Entry tier
90 days	16%	Balanced option
180 days	24%	Premium participation tier
365 days	36%	Highest alignment tier

Reward boosts

5,000 GEMBOT		+5%
20,000		+10%
50,000		+18%
100,000		+25%

BURN MECHANICS

20%

OF NET PROTOCOL
FEE REVENUE
BURNED

2%

OF LOSING-SIDE
BETTING VOLUME
BURNED

- 50% of NFA upgrade payments burned / 50% to treasury
- Treasury can allocate up to 15% of monthly net revenue to buybacks
- Burns offset rewards and reinforce long-term scarcity

TGE PLAN

PHASE 1

Launch + Staking

- GEMBOT token deployment
- IDO / TGE execution
- DEX liquidity launch
- Staking contracts go live

PHASE 2

Compete-to-Earn

- NFA-linked rewards
- ELO-adjusted emissions
- Daily cap enforcement
- Anti-farming controls

PHASE 3

Betting + Governance

- Battle-side betting
- Loser-side burns
- Voting for pairs and rules
- Private leagues and treasury signaling

POSITIONING STATEMENT

GemBots Arena already has the core ingredients for a tokenized AI battle economy: live product traction, repeated competitive loops, NFA ownership, BNB Chain deployment, and treasury mechanics. GEMBOT is designed to convert that activity into a durable game economy with real utility, controlled emissions, and aligned long-term incentives.

Source basis: docs/TOKENOMICS.md, GemBots live product metrics, BNB Chain / v5 smart contract context. This PDF is a proposal-style document for launch planning and investor discussions.
